COMP 354: Diary - Iteration 1

Talar Kochakejian
Student ID: 40018152
Role: Documenter/Organizer

February 11, 2018

Week 1: January 11 - 14

- Started reading the group project description.

- Watched online tutorials to familiarize myself with GitHub.

Week 2: January 15 - 21

- Went to the tutorial and lab and met my group members, we set a schedule for our upcoming meetings.

- Brainstormed with team members about the initial structure of our domain model.

- I created a GitHub repository and pushed an empty java project to the repository and shared it with my teammates so that coders can manage their code with version control

Week 3: January 22 - 28

- Read about how to use Latex

- Attended the tutorial and lab and the group meeting where we discussed the main scenarios and defined the three main use cases to be implemented by the coders (AddTransaction, ViewTransaction and Login).

- I was assigned the task of documenting parts 5-7 (user groups, functional requirements, non-functional requirements) from the requirements document.

Week 4: January 29 - February 4

- Wrote user groups and functional requirements parts of the document.

- Wrote non-functional requirements part of the document.

- Attended the tutorial, lab and group meeting, we reviewed the first draft of the requirements document and defined the changes and corrections to be applied on the document.

Week 5: February 5 - 11

- Made the corrections on my part of the document.

- Proofread the final version of the document with group members for iteration one.

- I added code changes, meeting minutes and other documents to our GitHub repository.

- Attended the tutorial, lab and discussed the next steps to follow for iteration two.
